- Georgian (Native Language).
- English (Full Professional Proficiency).
- Jira / Trello.
- Material UI, Mantine, Tailwind, Styled-Components.

ACTIVITIES

I have worked on various projects and developed different complex tasks from authentication to improving already existed legacy code.

[Cybertv](#) was the most challenging project and while working on it I've faced many difficulties. The most valuable Achievement was implementing an authentication. The rest of the contribution was in basic development such as creating components and different functionalities.

University of Georgia Research Portal was second project where I used previous experience and provided improved functionality. There were many components that required Forms in different ways therefore I had to work a lot with forms as well as basic development.

[NYSTA](#) – I have started as an intern at Nysta and had an opportunity to test my knowledge and learn new skills with amazing team around. After internship, in August I got offered a fulltime job and since then I have been working on various complex tasks such as payment integration, authorization etc.
